Eagle Scout

Tyler Beach

Security Architect | Product Security | AI-Enabled Security Automation | Application Security | Cloud Security | Developer Enablement

Wichita, Kansas, United States

Summary

I'm a security architect and former software engineer focused on helping organizations build secure products at scale without creating unnecessary friction for engineering teams. My background spans healthcare, manufacturing, SaaS, and nonprofit technology, where I've worked with engineers, product teams, and executive leadership to improve security outcomes while enabling teams to move quickly. My experience spans cloud-native, hybrid, and on-prem enterprise environments, including AWS, Azure, Kubernetes, operational technology, and regulated product ecosystems. Over the course of my career, I've worked across application security, product security, security architecture, threat modeling, secure software development, governance, risk management, and developer enablement in enterprise-scale environments. A few highlights:
• Built secure software development practices that influenced more than 1,000 developers across 3,000+ applications serving 70+ countries • Led application security efforts supporting global manufacturing modernization and connected operational technology initiatives • Provided security architecture guidance, threat modeling, architecture reviews, penetration testing support, governance oversight, and executive risk communication across complex product ecosystems • Integrated security tooling into CI/CD pipelines to improve developer workflows and accelerate remediation • Designed and implemented a scalable remediation strategy focused on the organization's most critical security findings, driving sustained improvement in regulatory vulnerability SLA compliance • Designed and implemented AI-enabled security automation capabilities that identify architecture design variances against approved ADRs and surface context-aware feedback directly within pull request workflows I'm especially interested in how automation and AI can help scale security engineering, reduce friction for developers, and improve the way organizations approach secure architecture and product security. Beyond my day-to-day security work, I'm

passionate about developing future technology leaders through teaching, mentoring, guest lecturing, and advisory engagement. I currently serve as an adjunct professor and value opportunities to connect industry experience with technology education. Core areas of focus: Application Security | Product Security | Security Architecture | Secure SDLC | Threat Modeling | Cloud Security | DevSecOps | Security Automation | AI-Enabled Security Engineering | Governance, Risk, & Compliance | Developer Enablement

Experience

Datavant

Senior Application Security Architect

November 2024 - Present (2 years)

• Partner across product, engineering, cloud, and platform teams spanning AWS, Azure, Kubernetes, containerized workloads, CI/CD environments, and identity-driven application ecosystems to improve security outcomes, strengthen engineering practices, and scale secure delivery

• Provide security architecture guidance, threat modeling, architecture reviews, and remediation support across products supporting provider workflows, release of information, and broader healthcare data operations in regulated environments

• Partner across product, engineering, and platform teams to improve security outcomes, strengthen engineering practices, and help scale secure delivery across the organization

• Design and implement scalable security automation that reduces friction for engineering teams, accelerates security feedback, and strengthens architectural governance through AI-enabled analysis

• Design and implement a scalable remediation program focused on the organization’s highest-priority security findings, driving sustained improvements in vulnerability management performance and regulatory SLA compliance

• Lead security review processes, architectural governance, and broader enterprise security initiatives across product teams and organizational efforts

• Support security integration efforts following M&A activity, helping align security practices, governance expectations, and architectural standards across acquired business units

Wichita State University

Adjunct Professor

January 2024 - Present (2 years 10 months)

Wichita, Kansas, United States

• Created and launched the first cybersecurity course within the Barton School of Business, originally introduced as MIS 690E and later established as the permanent graduate course MIS 711

• Designed and built the course curriculum from the ground up, combining foundational cybersecurity concepts with hands-on technical application using industry tools and real-world security scenarios

• Teach graduate students across topics including application security, network security, access control, cryptography, data protection, host hardening, and broader information security risk management

• Developed an experiential learning model where students operate as security consultants for simulated organizations, applying technical and strategic security practices throughout the semester and presenting outcomes in a final consultant demonstration

• Mentor students through the Wichita State MIS community and support professional development through guest lectures, industry guidance, and career mentorship

Cargill

6 years 2 months

Senior Application Security Engineer

July 2020 - November 2024 (4 years 5 months)

• Served as a primary technical application security resource for major product and digital transformation initiatives, helping teams build secure products while balancing delivery speed and business objectives

• Led application security efforts supporting Cargill's global manufacturing modernization and Factory of the Future initiatives, helping secure connected operational and enterprise technology environments

• Enhanced and revitalized secure software development practices across the organization, influencing more than 1,000 developers and security outcomes across 3,000+ applications serving 70+ countries

• Partnered with engineering, DevOps, cloud teams, and security vendors to modernize CI/CD security workflows across hybrid, cloud, and operational technology environments, helping shape SAST and SCA capabilities later incorporated into commercial security tooling through enterprise collaboration

• Provided security architecture guidance, threat modeling, architecture reviews, penetration testing support, and remediation strategy for high-visibility products including CARVE and CHEKT, helping secure platforms that achieved industry recognition and commercial traction

• Worked with stakeholders ranging from engineering leadership to executive and C-level business leaders to communicate risk, influence security decisions, and support strategic technology initiatives

• Built operational metrics and maturity indicators to improve visibility into product security performance, remediation progress, and organizational security outcomes

Information Technology Risk Analyst
October 2018 - July 2020 (1 year 10 months)

• Served as a primary business-facing security resource supporting multiple global Cargill business segments, helping manage the end-to-end risk and controls lifecycle across IT and operational technology environments supporting manufacturing operations

• Led and supported risk assessments, security reviews, audit engagements, compliance initiatives, remediation management, and control governance across global business and technology environments

• Acted as the technical go-to resource for the team, partnering with business stakeholders, engineering teams, and security leadership to assess risk, improve security posture, and support operational resilience

• Helped design and mature governance programs, security standards, and control frameworks aligned to business, regulatory, and operational security requirements

• Conducted security reviews and risk assessments across hybrid, on-premises, and operational technology environments, including infrastructure, network, and third-party security assessments supporting global manufacturing operations

Starkey Inc

Advisory Board Member (Advisory) - Starkey Inc
2022 - 2024 (2 years)

• Served as a technology advisory board member, providing strategic guidance on technology direction, workforce readiness, and industry-aligned technology initiatives

• Partnered with organizational leadership to offer practical industry perspective on technology strategy, emerging trends, and opportunities to strengthen technical programs and outcomes

• Helped bridge industry and community technology initiatives through advisory engagement focused on long-term technology planning and impact

Nonprofit Solutions, Inc.

Software Developer
March 2016 - October 2018 (2 years 8 months)
Wichita, Kansas Metropolitan Area

• Designed, built, and maintained full-stack .NET applications supporting multi-agency operations, serving as a primary technical resource across application architecture, development, maintenance, and ongoing platform enhancement

• Built a multi-agency CRM platform and internal business applications supporting workflows including ticketing, time tracking, user onboarding and access management, organizational directory services, vehicle management, and operational process automation

• Designed and implemented secure digital workflow solutions that transformed paper-based foster care and behavioral health processes into auditable,

compliant application workflows aligned with HIPAA and state contractual requirements

• Built application capabilities supporting sensitive healthcare and case management workflows within regulated care environments

• Developed and delivered general IT and security awareness training, helping improve organizational security practices and user readiness across distributed teams

Education

Friends University

Master of Science - MS, Cyber Security · (2016 - 2018)

Wichita State University

Bachelor of Business Administration (BBA), Management Information Systems · (2014 - 2016)

Cowley College

Associate of Arts (A.A.), Computer and Information Systems Security/ Information Assurance · (2012 - 2014)

Cowley College

Associate of Science (A.S.), Computer Science · (2012 - 2014)
